Deploying ML Application with Flask on Render using GitHub

Topics:

1) Introduction to Cloud Deployment Platforms
- Why use Render?
- Free vs Paid services

2) Preparing Project for Deployment
- Organizing code structure
- Creating requirements.txt

3) GitHub Setup
- Creating a GitHub repository
- Committing & pushing the code

4) Deployment on Render
- Creating a Render web service
- Connecting GitHub repo
- Setting build and start commands
- Setting environment variables

AWS .....
Azure ...
GCP ...

5) Post Deployment Testing
- Accessing the deployed URL
- Testing API with frontend
- Debugging common errors

Render =>

flask app
